ance Notes on Codes and Abbreviations" appearing at the begin-
ning of each regular issue of the PCT Gazette.

(54) Title: REVERSIBLE LINED DRAPERY

(57) Abstract: A reversible drape includes lining with an opening through which the drapery can be inverted so that a first decorative fabric is displayed on one side of the drapery, the lining is displayed on the other side, and the heading of the first decorative fabric is at the top of the drape, while a second decorative fabric preferably is disposed entirely within the drapery body along with the heading of the second decorative fabric. The drapery may be inverted again through the opening in the lining, so that the second decorative fabric is displayed on one side of the drapery, the lining is displayed on the other side, and the heading of the second decorative fabric is at the top of the drape, while the first decorative fabric preferably is disposed entirely within the drapery body along with the heading of the first decorative fabric now at the bottom of the drapery body. This reversibility allows one fabric to be selectively displayed with a second fabric hidden inside the drape and a third fabric preferably always visible on back of the drape regardless of whether the first fabric or the second fabric is showing on the front of the drape. The construction of the drapery allows the raw edges to be hidden regardless of which decorative fabric is shown.
